

Syed Abdul Rafay

+92 313 2975559 | sarafay2003@gmail.com | github.com/sarafay2003 | Karachi, Pakistan

PROFILE SUMMARY

Software Engineering graduate with hands-on experience in both backend development and software testing, comfortable picking up new tools as needed. Built projects in RESTful API design (C# / .NET), NLP-based applications, and retrieval-augmented generation. Completed an SQA internship at Paysys Labs covering API testing and defect management. Looking for a junior software engineering role where I can contribute and keep learning.

EDUCATION

Bahria University, Karachi Campus

Bachelor of Software Engineering

Karachi, Pakistan

Jun 2026

SKILLS

Languages & Frameworks: Python · C# · ASP.NET Core · FastAPI · SQL

AI / ML & NLP: LangChain · Hugging Face · FAISS · RAG pipelines · Prompt Engineering

Databases: SQL Server · SQLite · Relational Schema Design

DevOps & Tools: Docker · Git · GitHub Actions · Postman · Linux · REST APIs

Testing & QA: API Test Case Design · Defect Lifecycle Management · Regression Testing · Agile / Scrum

WORK EXPERIENCE

SQA Intern — Paysys Labs Pvt. Ltd., Karachi

Oct 2025 – Jan 2026

- Designed and executed API test cases to validate backend workflows, request/response payloads, authentication flows, and edge-case handling across multiple microservices.
- Tracked and documented software defects through a structured defect lifecycle; collaborated with developers to retest fixes and confirm resolution before deployment.
- Participated in sprint reviews and regression testing cycles in an Agile environment, ensuring release quality and acceptance criteria were consistently met.

PROJECTS

Payroll Management System API — C# / .NET · SQL Server · REST APIs

2025

- Built a RESTful backend API for payroll operations including employee onboarding, salary computation, deductions, and finalisation with role-based access control (RBAC).
- Designed a normalised SQL Server schema and optimised queries to handle large datasets efficiently.

Medical Report Explainer Chatbot — Python · LangChain · Hugging Face · FAISS

2025

- Built a Streamlit app that converts medical reports into plain-language summaries using a RAG pipeline (LangChain + FAISS + Hugging Face transformers).
- Implemented document ingestion, chunking, embedding generation, and semantic retrieval from scratch; applied prompt engineering for context-aware Q&A.

Face Recognition Security App — Python · OpenCV · SQLite

2025

- Developed a Python application for real-time face detection and recognition via live camera input using OpenCV.
- Built a backend registration and logging system with SQLite for persistent storage, flagging unknown individuals for access control.

CERTIFICATIONS

- Machine Learning Specialisation — Andrew Ng, DeepLearning.AI / Stanford University (supervised & unsupervised learning, neural networks, recommender systems, reinforcement learning)
- Generative AI — iCodeGuru (LLMs, prompt engineering, vector embeddings, RAG systems, practical AI application development)
- Docker Training Course — KodeKloud — containers, images, volumes, networking, and Docker Compose fundamentals
