PROFESSIONAL SUMMARY

Full-Stack Engineer (MERN) with hands-on experience building and maintaining secure, data-driven production systems for 100+ concurrent users. Skilled in designing scalable backend architecture, REST APIs, and database schemas with a strong focus on data integrity, performance, and reliability cutting page load times by 20% and backend latency by 10%+. Experienced in fast-paced, remote-first teams with end-to-end ownership from database design to deployed UI, and a disciplined, QA-driven approach well suited to regulated, high-reliability environments such as banking and financial services.

EDUCATION

Bachelors of Software Engineering (2022 - 2026)

Bahria University Karachi Campus

WORK EXPERIENCE

Frontend Engineer | Crafty Automation

January 2025 - March 2026

- Cut average page load time by 20% across 3+ production web apps by refactoring component architecture and implementing responsive, mobile-first layouts, strengthening overall system performance and reliability.
- Reduced client-reported UI bugs by 15% by writing unit tests with Jest for critical components and translating business requirements into type-safe TypeScript interfaces improving code reliability and reducing production risk.
- Maintained 100% brand-spec and requirement adherence across 5+ client sites by coordinating closely with design and backend teams during rapid sprint cycles, reflecting strong cross-functional communication and process discipline.
- Eliminated cross-browser rendering issues across Chrome, Safari, Firefox, and Edge by running structured manual QA passes before every release, ensuring consistent and dependable system behavior.

PROJECTS

Meridian Bank - Account & Transaction Management System | Full-Stack Developer

2024 | Client project | Tech Stack: Node.js, Express.js, SQLite, JWT, React (Vite), Tailwind CSS

- Designed and built a full-stack banking system with JWT-based authentication, role-based access control (customer vs. admin), and a normalized relational schema for users, accounts, and transactions.
- Built deposit, withdrawal, and inter-account transfer endpoints with server-side balance validation and atomic, all-or-nothing updates to keep linked account balances consistent.
- Enforced strict authorization so customers can only view or act on accounts they own, with a separate admin dashboard for viewing every account and balance in the system.
- Built a React (Vite, Tailwind CSS) dashboard for account balances, transaction history, and money transfers, connected to the REST API via Axios.

HireAI - AI-Enhanced Job Portal | Full-Stack Developer

October 2025 - February 2026 | Part-time academic project, built alongside coursework | Tech Stack: MongoDB, Express.js, React, Node.js (MERN), Redux Toolkit, Tailwind CSS

- Architected a MongoDB schema and REST API layer to securely manage sensitive user data for 100+ projected users, applying access-control and data-integrity practices.
- Cut backend response latency by 10%+ by optimizing Node.js/Express routes and integrating AI processing modules efficiently.
- Led a 3-person team through weekly sprint planning, delivering the project on a 6-month schedule with zero missed milestones.

SKILLS

- Languages: JavaScript, TypeScript, Python, C#, HTML5, CSS3, SQL
- Frontend: React.js, Redux Toolkit, Tailwind CSS, Bootstrap
- Backend: Node.js, Express.js, Django, REST APIs, .NET Core (exposure)
- Databases: MongoDB, PostgreSQL, SQL Server, SQLite
- Testing & Tools: Jest, Git, Postman, Agile/Scrum, VS Code, Visual Studio

CERTIFICATIONS & ACHIEVEMENTS

- Runner-up, university-level software development competition (MERN Stack web application)
